PATIENT INFORMATION SHEET	
18 TOPIC	HALLUX VALGUS (BUNION)
PROCEDURE	ROTATIONAL SCARF & AKIN OSTEOTOMY
AIMS OF SURGERY	To reduce pain and deformity To improve the big toe alignment [make straighter] To reduce callus / corn formation
ADVANTAGES OF THIS OPERATION	 localised procedure which does not involve other joints Reduces the misalignment which is the cause of the deformity
SPECIFIC RISKS OF THIS OPERATION	 Joint stiffness Over-correction (Hallux Varus) Non-union of bone (bone does not knit together) Fixation problems (with the screws/pins)
OVERVIEW	
Operation time	Usually between 45 to 60 minutes
Incision placement	Usually on top of the toe
Stitches	We try to use absorbable stitches (where possible)
Fixation	Internal fixation (bone screws or pins) are usually used You will not normally notice these and they do not usually need to be removed
Will I have plaster?	This not normally necessary. If your particular operation requires a plaster we will let you know in advance
Is this a Day Procedure?	Yes, you can usually go home the same day (you will usually be admitted for half a day)
Estimated time off work	Non-manual work approximately 4-6 weeks Manual work 6-8 weeks
INDICATIONS FOR THE PROCEDURE	Hammer toe deformity of big toe Arthritis of the big toe joint Pain from prominent joint Difficulty with shoe fit despite wearing sensible footwear
ALTERNATIVE TREATMENTS	Manage your symptoms by altering activity levels, using painkillers, changing footwear/ extra- width or special footwear possibly with a cushion-pad or in-shoe foot support. (The use of insoles/orthoses or toe splints has not been shown to correct toe deformity)
GENERAL RISKS OF SURGERY	The anaesthetic options and general risks of foot surgery are outlined in the Generic Pre- operative Information Booklet for Patients with which you will have already been provided YOU SHOULD READ THIS LEAFLET IN CONJUNCTION WITH THE GENERIC PRE- OPERATIVE INFORMATION BOOKLET FOR PATIENTS (Numbered 1)

Answers to Common Questions

The Operation

The operation is usually performed under a local anaesthetic, around the metatarsal and the ankle. Most patients find this to be more comfortable than a dental injection.

The operation takes about an hour, although you will be in the Day Surgery unit for longer You must have a competent adult at home for the first day and night after surgery. This allows us to be sure you will be safe for the first night.

First 2-4 days

- This is the worse time for pain but you will be given painkillers to help. You must rest completely for 2-4 days.
- You will be able to stand and take weight carefully (using crutches) after the operation, but you must rest, with your feet up, as much as possible.
- You should restrict your walking to going to the bathroom and when getting about use your crutches in the way you will have been shown.
- You can get about a little more after 3 days.

3 – 5 days after surgery

- You will need to attend for your foot to be checked and re-dressed.
- You may start to do a little more within pain limits. Pain means you are doing too much.

Two weeks after surgery

- You must attend again. Sutures will be removed or trimmed, unless there are any on the sole of the foot (these are taken out after 3 weeks).
- You will not need a bandage, probably will not need the crutches and can get the foot wet providing the wound has healed satisfactorily.

Between 2-6 weeks after surgery

- The foot starts to return to normal and you can return to shoes (6-8 weeks).
- The foot will still be quite swollen especially at the end of the day.
- You may require a review appointment at 4-6 weeks
- You may return to work but may need longer if you have an active job
- You may return to driving if you can perform an emergency stop. You must check with your insurance company before driving again.
- Whilst normal activity will be resumed, sport should be avoided.

Between 8-12 weeks after surgery

- The foot should continue to improve and begin to feel normal again.
- There will be less swelling.
- Sport can be considered after 3 months depending on your recovery.

Six months after surgery

- You will have a final review between 3- 6 months following surgery.
- The swelling should now be slight and you should be getting the full benefit of surgery.

Twelve months after surgery

• The foot has stopped improving with all healing complete.

Please note; if a complication arises, recovery may be delayed.
